

HOSPITAL PERFORMANCE REPORT

28 COMMON MEDICAL PROCEDURES & TREATMENTS

Report period: Federal Fiscal Year 2002 (October 1, 2001 through September 30, 2002)

**Counties included
in this Report:**

- Berks
- Bucks
- Carbon
- Chester
- Delaware
- Lehigh
- Northampton
- Montgomery
- Schuylkill
- Philadelphia

TABLE OF CONTENTS

Key Findings 1

Understanding this Report 2

Descriptions 8

Diagnoses

- Abnormal Heartbeat 10
- Blood Clot in Extremities 12
- Blood Clot in Lung 14
- Chronic Obstructive Pulmonary Disease (COPD)..... 16
- Congestive Heart Failure (CHF)..... 18
- Diabetes with Amputation 20
- Diabetes—Medical Management 22
- Heart Attack—Medical Management..... 24
- Kidney Failure..... 26
- Kidney and Urinary Tract Infections 28
- Lung Cancer..... 30
- Pneumonia—Aspiration 32
- Pneumonia—Infectious..... 34
- Poisoning and Toxic Effects of Drugs 36
- Septicemia..... 38
- Stomach and Intestinal Bleeding 40
- Stroke—Hemorrhagic 42
- Stroke—Non-Hemorrhagic..... 44

Procedures

- Abdominal Aortic Aneurysm Repair 46
- Colorectal Procedures 48
- Gallbladder Removal—Laparoscopic..... 50
- Gallbladder Removal—Open 52
- Heart Attack—Angioplasty/Stent..... 54
- Hip Fracture—Surgical Repair 56
- Hysterectomy—Abdominal..... 58
- Hysterectomy—Vaginal..... 60
- Prostatectomy—Radical..... 62
- Prostatectomy—Transurethral..... 64

Key Findings

- Between the calendar year (CY) 2001 and federal fiscal year (FFY) 2002, there were slight changes in mortality rates, with decreases in 5 and increases in 6 of the 16 procedure or treatment groups where two years of mortality data were available. The largest decrease was seen in medical AMI, where the mortality dropped from 14.9% in 2001 to 14.4% in 2002. The largest increase was in abdominal aortic aneurysm repair, where the mortality went from 3.3% to 4.2%.
- In terms of risk-adjusted mortality ratings, there was consistency in hospital performance. Generally, hospitals with good ratings in CY01 were more likely than other hospitals to achieve them in FFY02. A similar pattern was seen in hospitals with poor ratings.
- There was substantial variation among readmission rates for complications or infection in FFY02. For example, hospitals' risk-adjusted readmission rates for complications or infection for Stomach and Intestinal Bleeding ranged from 0% to 44.5%. The state average was 4.7%
- The readmissions for complications or infection amounted to over \$410 million in charges and more than 93,000 hospital days (for the conditions for which this measure was reported).
- Between CY 2001 and FFY 2002, readmission rates for complications or infection increased slightly in 5 of the 8 procedure or treatment groups where two years of readmission rates were available.
- Among the conditions reported, Hemorrhagic Stroke had the highest readmission rate for complications or infection at 7.7% and Poisoning and Toxic Effects of Drugs had the lowest rate at 0.9%.
- In terms of readmissions for any reason, there was substantial variation among hospitals' rates in FFY 2002. For example, hospitals' risk-adjusted readmission rates for Diabetes with Amputation ranged from 0% to 66.9%. The state average was 23.5%
- Between CY 2001 and FFY 2002, readmission rates for any reason increased slightly in 5 of the 8 procedure or treatment groups where two years of readmission rates were available.
- There was wide variation in length of stay among hospitals. The condition with the most variation was Diabetes with Amputation where hospitals' average length of stay ranged from 4.9 to 17.7 days after taking patient risk factors into account. The condition with the second highest variation was Septicemia, where hospitals' risk-adjusted average length of stay ranged from 3.4 to 12.4 days.
- Between CY 2001 and FFY 2002, there were slight changes in average length of stay, with decreases in 5 and increases in 4 of the 16 procedure or treatment groups where two years of length of stay data were available.

Understanding this Report

Foreword

The Pennsylvania Health Care Cost Containment Council (PHC4) was established as an independent state agency by the General Assembly and Governor of the Commonwealth of Pennsylvania in 1986. To help improve the quality and restrain the cost of health care, PHC4 promotes health care competition through the collection, analysis and public dissemination of uniform cost and quality-related information. Thanks to the vision of its General Assembly, Pennsylvania has begun to build a new health care marketplace where purchasers, consumers, providers, payors, and policy makers can make more informed decisions about the delivery of health care. This *Hospital Performance Report* is one of a series of public reports designed to achieve this goal. Information about additional treatment and surgical categories is posted on the PHC4 Web site at www.phc4.org.

What is the purpose of the report?

Before we make a major purchase, we normally familiarize ourselves with as much information as we can gather about the available products or services. By comparing what we can learn about the quality of the product as well as what will be charged for it, we decide on what we believe is the best quality product for the best possible price. It should be the same with health care services. Unfortunately, the information available to consumers and pur-

chasers to make such decisions is limited and often not widely accessible. PHC4's *Hospital Performance Report* can help to fill that vacuum of information and assist consumers and purchasers in making more informed health care decisions. This report can also serve as an aid to providers in highlighting additional opportunities for quality improvement and cost containment. It should not be used in emergency situations.

What is new in this report?

Clinical Conditions - This report now includes 28 conditions based on ICD-9-CM (International Classification of Diseases, Ninth Revision, Clinical Modification) codes, which specify the clinical reason(s) for a patient's hospitalization. Of the 28 code-based conditions, there are 18 diagnoses and 10 procedures. Descriptions of these conditions are on pages 8 and 9.

About this report

- This report covers inpatient hospital discharges during Federal Fiscal Year (FFY) 2002, which includes data from October 1, 2001 through September 30, 2002.
- This report is divided into three regional versions and is hospital-specific.
- All Pennsylvania general and most specialty general acute care hospitals, regardless of bed size, are included.

- The hospital names have been shortened in many cases for formatting purposes. Hospital names may be different today than during the time period covered in this report due to mergers and name changes. A list of changes can be found on the PHC4 Web site at www.phc4.org.

Where does the data come from?

Pennsylvania hospitals are required by law to submit certain information to PHC4. The data compiled for the purpose of this publication is reported as it was submitted to PHC4 by Pennsylvania hospitals. The data was subject to standard verification processes by PHC4. In addition, hospitals are required to submit data indicating in simple terms “how sick the patient was” or, in technical jargon, a “severity score.” The data are then risk-adjusted.

Accounting for high-risk patients

Even though two patients may be admitted to the hospital with the same illness, there may be differences in the seriousness of their conditions. In order to report fair comparisons among hospitals, PHC4 uses a complex mathematical formula to “risk-adjust” the data, meaning that hospitals receive “extra credit” for treating patients that are more seriously ill or at a greater risk than others. Risk-adjusting the data is important because sicker patients may be more likely to die, stay in the hospital longer, or be readmitted.

The hospitals use a sophisticated patient risk classification system, called Atlas Outcomes™, to predict each patient’s chance of mortality and expected length of stay. Hospitals with more high-risk patients are expected to have higher mortality rates and longer lengths of stay. Atlas Outcomes™ is a clinical information system developed by MediQual Systems, Inc.®, a business of Cardinal Health. This system is based on electronically available admit/discharge/transfer and laboratory data as well as selected clinical data abstracted from the patient record including EKG readings, vital signs, medical history, imaging, pathology and operative results. PHC4 also independently adjusts for other risk factors such as poverty rate or the presence of cancer in the patient population included in this report.

A comprehensive description of the risk-adjustment techniques used for this report can be found in the *Technical Notes* on PHC4’s Web site at www.phc4.org.

What is measured in the report and why is it important?

PHC4’s mission is to provide the public with information that will help to improve the quality of health care services while also providing opportunities to restrain costs. The measurement of quality in health care is not an exact science. There may be a number of ways to define quality; however, for the purposes of this report, six measures are suggested. (With

Information about additional treatment and surgical categories is posted on the PHC4 Web site at www.phc4.org

the exception of volume of cases, each of these measures has been adjusted for patient risk. (For more information, see the previous section entitled, *Accounting for high-risk patients.*)

- *Volume of Cases* – For each hospital, the number of cases in each condition after exclusions is reported. This can give a patient or a purchaser an idea of the experience each facility has in treating such patients. Studies have suggested that in at least some areas, the volume of cases treated by a physician or hospital can be a factor in the success of the treatment.

The number of cases represents separate hospital admissions, not individual patients. A patient readmitted several times would be included each time in the number of cases. Outcome data are not reported for hospitals that had fewer than five cases

evaluated for a measure; such low volume cannot be considered meaningful and, as such, the outcome data are not displayed. *Not Reported* appears in the table when this occurs.

Note: Small or specialty hospitals may report low volume due to the unique patient population they serve or geographic location.

- *Risk-Adjusted Mortality* – PHC4 has used risk-adjusted mortality statistics as a measure of quality since it began publishing reports in 1989. To determine the mortality rating, PHC4 compares the number of patients one could reasonably expect to die in a given hospital in a given condition with the actual number of deaths.
- *Risk-Adjusted Length of Stay* – The length of time a patient stays in the hospital can reflect how successful the hospital is in providing treatment and has an impact on the resources used in delivering treatment.
- *Risk-Adjusted Length of Stay Outlier Rates* – Length of stay “outliers” are abnormally short or long hospitalizations – those individual hospitalizations where the difference between the actual and expected length of stay was in the top (long length of stay outliers) or bottom (short length of stay outliers) 5% of all statewide hospitalizations. They are the hospitalizations where the difference between the actual and expected length of stay was above or below the normal range for all hospitaliza-

Understanding the Symbols

Symbols representing risk-adjusted mortality ratings and length of stay outlier ratings are displayed in the report. These symbols reflect a comparison of a hospital's actual rate and what is expected.

- Significantly higher than expected
- ⊙ Not significantly different than expected
- Significantly lower than expected

tions in the state. For any one hospital, the outlier rate is the number of outliers divided by the total number of hospitalizations. Hospitals with low volume may have widely varying outlier rates even though there are only small differences between the numbers of outlier cases. Take for example two hospitals that each have only 5 cases in a given condition. If one hospital has a single outlier case it would have a 20% outlier rate. However, a hospital with no outliers would have a 0% outlier rate. The length of stay outlier rating indicates whether the rate is significantly higher or lower than expected after taking the overall volume of cases in the condition into account.

Length of stay may be an important quality of care indicator; however, many factors affect length of stay, some of which are beyond the hospital's control. Abnormally short or long hospital stays may result from factors such as payor expectations, complications, or avoidable admissions due to inadequate health and social support in the community (see the *Technical Notes* on the PHC4 Web site, www.phc4.org, for a detailed description).

- *Risk-Adjusted Readmissions, by Percent* – A re-admission is defined as a subsequent acute care hospitalization, for any reason in any Pennsylvania hospital, where the admit date is within 30 days of the discharge date of the original hospitalization. While some re-

hospitalizations can be expected, high quality care may lessen the need for subsequent hospitalizations.

- *Risk-Adjusted Readmissions for Complication/Infection, by Percent* – The risk-adjusted re-admission (discussed above) takes into consideration all subsequent hospitalizations within 30 days of the discharge date of the original hospitalization. However, this measure includes only readmissions with a principal diagnosis of a complication/infection (see the *Technical Notes* on the PHC4 Web site, www.phc4.org, for a detailed description).

Other Data Issues

- *Do Not Resuscitate Cases* - The mortality analysis includes Do Not Resuscitate (DNR) cases.
- Not all data is reported for all measures. For example, lung cancer is a terminal illness where death is often the expected outcome; therefore, mortality and readmission rates are not meaningful measures of the quality of care and are not reported. Another example would be conditions, such as Heart Attack – Medical Management, where readmission rates are not reported because subsequent admissions are often planned.

Hospital Charges

This report also includes the average hospital charge for each of the 28 code-based conditions. While charges are what the hospital reports on the billing form, they may not accurately represent the amount a hospital receives in payment for the services it delivers. Hospitals usually receive less in actual payments than the listed charge. However, charges are the only data compiled that reflect the relative cost of all services provided by hospitals. Consequently, hospital charges are used almost universally by those attempting to assess the costs of health care.

A look at the financial data submitted by hospitals to PHC4 can shed some light on the relationship between the amount hospitals charge or bill for services, and the amount they receive in Net Patient Revenue (NPR). According to PHC4's *Hospital Financial Analysis 2002, Volume One*, Pennsylvania hospitals received, on average statewide, \$.34 in NPR for every dollar that they charged in PA Fiscal Year 2002 (7/1/01 through 6/30/02).

Within the geographic area covered in this report, hospitals received, on average, \$.28 in NPR for every dollar charged. Broken down even further, hospitals within the city of Philadelphia received, on average, \$.26 in NPR for every dollar charged, suburban Philadelphia hospitals received an average of \$.25 on the dollar, and hospitals in the Lehigh Valley/Reading area received an average of \$.50 on the dollar.

These regional figures are aggregate only and cannot be applied to individual hospitals or individual average charges for conditions to calculate actual payment figures. This is due to substantial variation in hospital charges from hospital to hospital and from insurance product line to product line. There is also substantial variation in actual payments that hospitals receive for specific services. Actual payments to hospitals are imposed by Medicare and Medicaid, or result from negotiations with insurance companies, other third-party payors, and even individual patients.

How to use the report

- **Patients/Consumers** can use this report as an aid in making decisions about where to seek treatment for the conditions detailed in this report. As with any health care decision, PHC4 urges the reader to use this report in conjunction with a physician or other health care provider when making a health care decision.
- **Group Benefits Purchasers/Insurers** can use this report as part of a process in determining where employees, subscribers, members, or participants should go for their health care.
- **Health Care Providers** can use this report as an aid in identifying opportunities for quality improvement and cost containment.

- **Policy Makers/Public Officials** can use this report to enhance their understanding of health care issues, to ask provocative questions, to raise public awareness of important issues and to help constituents identify quality health care options.
- **All of the previously mentioned groups** can use this information to raise important questions about why differences exist in the quality and efficiency of care.

This report can be used as a tool. It should not be used to generalize about the overall quality of care at a hospital, but instead to examine hospital performance in specific treatment categories. The measurement of quality is highly complex, and the information used to capture such measures is limited. A hospital death is frequently an unavoidable consequence of a patient's medical condition. Hospitals and physicians may do everything right and the patient can still die. However, the statistical methods used eliminate many of the clinical and medical differences among the patients in different hospitals, thereby allowing us to explore the real differences in the measures presented in this report. The pursuit of these issues can play an important and constructive role in raising the quality while restraining the cost of health care in the Commonwealth of Pennsylvania.

Non-Compliant Hospitals

Hospitals are required under Pennsylvania law (Act 14) to submit timely, accurate health care data to PHC4. PHC4, acting upon the advice of its Technical Advisory Group, a panel of physicians and other health care experts, has determined that hospitals missing the required UB-92 data or patient severity scores in excess of or equal to 10% overall are non-compliant with state law and are excluded from this report. These hospitals are listed below. Hospitals that were non-compliant in this reporting period but are currently compliant are so noted. Although hospitalization data specific to non-compliant hospitals is not shown in this report, these records have been included in the overall analysis for the measures included in this report, and thus are reflected in the statewide and regional totals.

Hospitals Excluded from this Report Due to Non-Compliance

- Ashland Regional Medical Center
- Medical College of Pennsylvania*
- Montgomery Hospital
- Wills Eye Hospital*

** These facilities are now compliant for both the fourth quarter of 2002 and the first quarter of 2003. PHC4 wishes to acknowledge the hard work performed by the overwhelming majority of Pennsylvania hospitals in meeting the requirements of Act 14.*

Code-Based Diagnosis Descriptions

Abnormal Heartbeat: Abnormal heart rate or rhythm including tachycardia, bradycardia, fibrillation, flutter and heart block. Does not include heart attack, congenital heart defects, or heart valve disorders.

Blood Clot in Extremities: Inflammation of a blood vessel with the formation of a thrombus (blood clot) in a deep or superficial vein involving the legs, arms, and other parts of the body. Includes deep vein thrombosis (DVT).

Blood Clot in Lung: The formation of a thrombus (blood clot) and/or infarction (damage or death) of the lung tissue. Often called pulmonary embolism or pulmonary infarct.

Chronic Obstructive Pulmonary Disease (COPD): Chronic lung disease where breathing is difficult due to airway narrowing, excess mucus production or inflammation. It is caused most frequently by bronchitis, asthma, or emphysema.

Congestive Heart Failure (CHF): Heart failure occurs when the heart loses its ability to pump enough blood through the body. Heart failure usually worsens over time as the heart gradually loses its pumping ability, works less efficiently, resulting in high blood pressure and fluid collection in lungs.

Diabetes with Amputation: Includes patients who have diabetes and undergo an amputation of the arm, leg, or toe.

Diabetes – Medical Management: Includes patients hospitalized for control of blood sugar. Conditions include coma, high blood sugar crisis, and fluid imbalances. Kidney, eye, nerve, or blood vessel damage related to diabetes are included.

Heart Attack – Medical Management: A heart attack (myocardial infarction) occurs when there

is blockage or obstruction in the blood vessels that supply oxygen to the heart muscle causing an infarction (damage or death) to an area of the heart. Included are heart attack patients who were treated without a balloon (angioplasty) procedure or open heart surgery.

Kidney Failure: Short and long-term kidney (renal) failure due to high blood pressure, heart disease, or damage to kidney tissue. Does not include dialysis or transplants.

Kidney and Urinary Tract Infections: Acute and chronic infections of the kidney and urinary tract. Does not include urinary stone or urinary symptoms such as frequency, bleeding, or pain.

Lung Cancer: Includes the initial diagnosis, as well as follow-up care, for patients with cancerous and non-cancerous tumors. Does not include chemotherapy.

Pneumonia – Aspiration: Inflammation of the lungs and bronchial tubes caused by inhaling foreign material, such as food, drink, vomit, or secretions from the mouth into the lungs. Does not include infectious pneumonia.

Pneumonia – Infectious: Simple pneumonia (inflammation of the lung) includes viral and bacterial pneumonia, as well as pleurisy, an inflammation of the membrane surrounding the lungs.

Poisoning & Toxic Effects of Drugs: Toxic effects of overdose, wrong substance given or substance taken in error. Prescription medications, non-medical drugs such as ethyl alcohol and heroin, substances such as pesticides and metals, and gases such as carbon monoxide are included. Does not include drug abuse or dependency.

Stomach and Intestinal Bleeding: Bleeding from ulcers or areas of inflammation in the stomach, small or large intestine, rectum, or esophagus (muscular tube that connects the mouth to the stomach).

Septicemia: Also known as blood poisoning, is a system-wide infection of the patient's blood. Does not include post-operative or post-injury infections.

Stroke – Hemorrhagic: Stroke is a cardiovascular disease that affects the blood vessels supplying blood to the brain. In hemorrhagic strokes, a blood vessel in the brain breaks or ruptures and causes bleeding (hemorrhage) within or around the brain.

Stroke – Non-hemorrhagic: In ischemic (non-hemorrhagic) strokes, a blood clot blocks a blood vessel in the brain or an artery leading to the brain. This is the most common type of stroke. Transient ischemic attack (temporary stroke symptoms) is not included.

Code-Based Procedure Descriptions

Abdominal Aortic Aneurysm Repair: An abdominal aortic aneurysm (AAA) is a bulge in the aorta (the aorta is the main blood vessel coming from the heart that supplies blood to all organs) in the abdomen. Does not include endovascular (minimally invasive graft technique) repairs or ruptured aneurysm repairs.

Colorectal Procedures: The majority of colorectal procedures are performed in relation to the presence of cancer or diverticulitis (inflammation of part of the lower digestive tract). Does not include patients with abdominal trauma.

Gallbladder Removal – Laparoscopic: Cholecystectomy is the operation for removal of the gallbladder. Included are patients who underwent this type of surgery carried out with a laparoscope (microscopic camera) through 3 or 4 small incisions.

Gallbladder Removal – Open: Traditional gallbladder removal surgery that is carried out through an incision in the right side of the upper abdomen.

Heart Attack – Angioplasty/Stent: Treatment (called percutaneous transluminal coronary angioplasty or PTCA) of a heart attack using special balloons to open up obstructed arteries and increase blood flow to the heart. Often, a stent (a mesh tube) is inserted in the blocked or narrowed artery to open it wider and prevent renarrowing or recurring blockage. Does not include coronary artery bypass graft surgery (CABG).

Hip Fracture – Surgical Repair: Fracture ("broken bone") of the hip involves the top portion of the femur (thigh bone). Surgical repair includes inserting a pin, rod or screw into the bone to hold the fracture together for healing or may also include a partial or total hip joint replacement.

Hysterectomy – Abdominal: A hysterectomy is an operation, performed through an abdominal incision, to remove the uterus (womb) and sometimes the ovaries and fallopian tubes. This type of surgery is performed when vaginal or laparoscopic approaches are deemed inappropriate for a variety of conditions including female cancers, uterine fibroids, endometriosis, pelvic trauma, and uterine or vaginal prolapse.

Hysterectomy – Vaginal: Includes hysterectomy through a vaginal approach and those laparoscopically (use of microscopic camera) assisted. Includes hysterectomy performed for a variety of conditions such as female cancers, pelvic trauma, uterine fibroids, and endometriosis.

Prostatectomy – Radical: Radical prostatectomy is the surgical removal of the entire prostate. This type of surgery is usually performed when localized cancer is present.

Prostatectomy – Transurethral: This type of surgery involves the surgical removal of part of the prostate gland and is usually done to relieve urinary symptoms caused by benign (non-cancerous) enlargement of the prostate.

- Significantly higher than expected.
- ⊙ Not significantly different than expected.
- Significantly lower than expected.
- NR Not reported. Had fewer than five cases evaluated.

The mortality, length of stay, and readmission figures account for varying illness levels among patients. See page 3.

* Indicates hospitals that provided advanced cardiac services (angioplasty/stent procedures) during FFY02. This information is provided since patients admitted to facilities that do not provide advanced cardiac services may be transferred, for further diagnosis and treatment, to facilities that provide these services.
