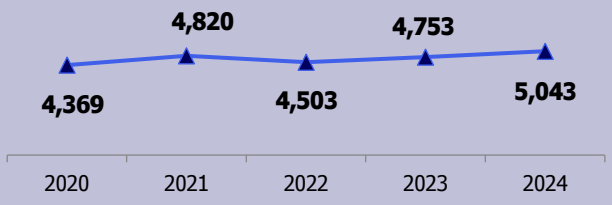
Key Findings & Statewide Statistics

Percutaneous Coronary Intervention (PCI) without a Heart Attack

Number of Cases



CY 2020 – CY 2022 data are displayed for trending purposes only and are not included in the report analyses.

There were **9,796** hospitalizations, after exclusions, for patients who underwent a percutaneous coronary intervention (PCI) procedure performed in a Pennsylvania acute care hospital during Calendar Years (CY) 2023 and 2024. Patients who had a heart attack were not included. These inpatient hospitalizations are examined in the **Hospital Results** section of this report in determining statewide rates of mortality, readmission, and postoperative length of stay.
