

# Kidney and Urinary Tract Infections

## Table Notes

**Kidney and Urinary Tract Infections:** Infections of the urinary tract, which includes the kidneys (pyelonephritis) and bladder (cystitis). These infections can be acute or chronic.

**Total Number of Cases** includes all inpatient hospitalizations, after exclusions, for patients 18 years and older who were treated for a principal diagnosis of kidney or urinary tract infection. Patients with a diagnosis of COVID-19 that was present on admission were excluded, as well as those who were transferred to another acute care hospital or left against medical advice.

**Mortality** represents patients who died during the hospital stay.

**Readmission** represents patients who were readmitted to a Pennsylvania general or specialty general acute care hospital within 30 days of the discharge date of the original hospitalization. Out-of-state residents were excluded because readmission data was not available for patients readmitted to a non-Pennsylvania hospital. Planned readmissions were not counted.

**Average Hospital Charge** represents the entire length of stay and is trimmed and case-mix adjusted. Professional fees were not included. In almost all cases, hospitals typically receive actual payments from private insurers or government payers that are considerably less than the listed charge.

## Understanding the Symbols

The symbols displayed in this report represent a comparison of a hospital's actual mortality (or readmission) rate to what is expected, after accounting for patient risk.

The ○ symbol indicates the **hospital's rate was significantly lower than expected**. Fewer patients died (or were readmitted) than could be attributed to patient risk and random variation.

The ⊙ symbol indicates the **hospital's rate was not significantly different than expected**. The number of patients who died (or were readmitted) was within the range anticipated based on patient risk and random variation.

The ● symbol indicates the **hospital's rate was significantly higher than expected**. More patients died (or were readmitted) than could be attributed to patient risk and random variation.

See [About the Report](#) section or [Technical Notes](#) for further details.
