

PA Health Care Cost Containment Council

Southeastern Pennsylvania

Hospital Performance Report

October 2016 – September 2017
Data

November 2018

About the Report

Hospital Performance Report for Pennsylvania

Produced by the Pennsylvania Health Care Cost Containment Council (PHC4), this report displays hospital-specific results for inpatient hospital discharges from the period October 2016 through September 2017. In addition to this **About the Report** document, which provides a full description of the *Hospital Performance Report*, the PHC4 website also presents the following accompanying materials:

About PHC4

Created by the PA General Assembly in 1986, the PA Health Care Cost Containment Council (PHC4) is an independent state agency charged with collecting, analyzing and reporting information that can be used to improve the quality and restrain the cost of health care in the state. Today, PHC4 is a recognized national leader in public health care reporting, and nearly 100 organizations and individuals annually utilize PHC4's special requests process to access and use data. PHC4 is governed by a 25-member board of directors, representing business, labor, consumers, health care providers, insurers, and state government.

Joe Martin, Executive Director
225 Market Street, Suite 400, Harrisburg, PA 17101

About the Report

What is the purpose of this report?

Before we make a major purchase, we usually gather as much information as we can about the available product or service. By comparing what we learn about the quality of the product as well as what will be charged for it, we decide on what we believe is the best product for the best possible price. When it comes to health care services, unfortunately, the information available to consumers and purchasers to make such decisions is limited and often not widely accessible. PHC4's *Hospital Performance Report* (HPR) can help to fill the information vacuum and assist consumers and purchasers in making more informed health care decisions. The HPR can serve as an aid to providers in highlighting additional opportunities for quality improvement and cost containment. It should not be used in emergency situations.

About this report

- This report includes hospital-specific outcomes for 16 different medical conditions and surgical procedures, as defined by ICD-10-CM/PCS (International Classification of Diseases, Tenth Revision, Clinical Modification/Procedure Coding System) codes and Medicare Severity – Diagnosis-Related Groups (MS-DRGs). Technical Notes relevant to this report provide additional detail. They are posted to PHC4's website at www.phc4.org.
- This report covers adult (18 years and older) inpatient hospital discharges, regardless of payer, during the period October 2016 through September 2017.
- This report is divided into three regional versions: Western Pennsylvania, Central and Northeastern Pennsylvania, and Southeastern Pennsylvania. (Please see sidebar on this page for details.)
- All Pennsylvania general acute care and several specialty general acute care hospitals are included. Children's hospitals and some specialty hospitals are not reported because they

This report is divided into three regional versions: Western Pennsylvania, Central and Northeastern Pennsylvania, and Southeastern Pennsylvania.

Western Pennsylvania includes the following counties:

Allegheny ▪ Armstrong ▪ Beaver
Bedford ▪ Blair ▪ Butler ▪ Cambria
Cameron ▪ Clarion ▪ Clearfield
Crawford ▪ Elk ▪ Erie ▪ Fayette
Forest ▪ Greene ▪ Indiana
Jefferson ▪ Lawrence ▪ McKean
Mercer ▪ Potter ▪ Somerset
Venango ▪ Warren ▪ Washington
Westmoreland

Central and Northeastern Pennsylvania includes the following counties:

Adams ▪ Bradford ▪ Centre
Clinton ▪ Columbia ▪ Cumberland
Dauphin ▪ Franklin ▪ Fulton
Huntingdon ▪ Juniata
Lackawanna ▪ Lancaster
Lebanon ▪ Luzerne ▪ Lycoming
Mifflin ▪ Monroe ▪ Montour
Northumberland ▪ Perry ▪ Pike
Snyder ▪ Sullivan ▪ Susquehanna
Tioga ▪ Union ▪ Wayne ▪ Wyoming
York

Southeastern Pennsylvania includes the following counties:

Berks ▪ Bucks ▪ Carbon ▪ Chester
Delaware ▪ Lehigh ▪ Montgomery
Northampton ▪ Philadelphia
Schuylkill

About the Report

typically treat few cases relevant to the conditions and procedures included in this report. Hospitals that closed or merged with other facilities during the study period are not reported, nor are hospitals that recently opened since the data available does not represent the full time frame of the report.

- Hospital names have been shortened in many cases for formatting purposes. Hospital names may be different today than they were during the period covered in this report due to mergers and name changes.

About the data

Hospital discharge data compiled for this report was submitted to PHC4 by Pennsylvania hospitals. The data was subject to standard validation processes by PHC4 and verified for accuracy by the hospitals at the individual case level. The ultimate responsibility for data accuracy and completeness lied with each individual hospital.

Medicare fee-for-service payment data was obtained from the Centers for Medicare and Medicaid Services (CMS). The most recent Medicare payment data available to PHC4 for use in this report was for federal fiscal year 2017.

Accounting for high-risk patients

Included in the data PHC4 receives from Pennsylvania hospitals is information indicating, in simple terms, “how sick the patient was” on admission to the hospital—information that is used to account for high-risk patients. Even though two patients may be admitted to the hospital with the same illness, there may be differences in the seriousness of their conditions. In order to report fair comparisons among hospitals, PHC4 uses a complex mathematical formula to risk adjust the mortality and readmission data included in this report, meaning that hospitals receive “extra credit” for treating patients who are more seriously ill or at a greater risk than others. Risk adjusting the data is important because sicker patients may be more likely to die or be readmitted.

PHC4 uses clinical laboratory data, patient characteristics such as age, gender, race/ethnicity, and socioeconomic status, and billing codes that describe the patient’s medical conditions such as the presence of cancer, heart failure, etc., to calculate risk for the patients in this report.

About the Report

PHC4 uses clinical laboratory data, patient characteristics such as age, gender, race/ethnicity, and socioeconomic status, and billing codes that describe the patient's medical conditions such as the presence of cancer, heart failure, etc., to calculate risk for the patients in this report. A comprehensive description of the risk-adjustment techniques used for this report can be found in the Technical Notes on PHC4's website at www.phc4.org.

What is measured in this report and why is it important?

In the hospital results section of the report are the following measures, reported for each hospital:

- **Total Number of Cases.** For each hospital, the number of cases for each condition, after exclusions, is reported. This can give a patient or a purchaser an idea of the experience each facility has in treating such patients. Studies have suggested that, in at least some areas, the volume of cases treated by a physician or hospital can be a factor in the success of the treatment. The number of cases represents separate hospital admissions, not individual patients. A patient admitted several times would be included each time in the number of cases. Outcome data are not reported for hospitals that have fewer than five cases evaluated for a measure; such low volume cannot be considered meaningful and, as such, the outcome data are not displayed. Not Reported (NR) appears in the table when this occurs. Note that small or specialty hospitals may report low volume due to the unique patient population they serve or geographic location.
- **Risk-Adjusted Mortality.** This measure is reported as a statistical rating that represents the number of patients who died during the hospital stay. To determine the mortality rating, PHC4 compares the number of patients one could reasonably expect to die in a given hospital for a given condition, after accounting for patient risk, with the actual number of

Understanding the Symbols

The symbols displayed in this report represent a comparison of a hospital's actual rate of mortality or readmission to what is expected after accounting for patient risk.

- **Hospital's rate was significantly lower than expected.** Fewer patients died or were readmitted than could be attributed to patient risk and random variation.
- **Hospital's rate was not significantly different than expected.** The number of patients who died or were readmitted was within the range anticipated based on patient risk and random variation.
- **Hospital's rate was significantly higher than expected.** More patients died or were readmitted than could be attributed to patient risk and random variation.

About the Report

deaths. (Please see “Understanding the Symbols” box on this page.) PHC4 has used risk-adjusted mortality statistics as a measure of quality since it began publishing reports in 1989. The mortality analysis includes Do Not Resuscitate (DNR) cases. Because DNR is defined and utilized differently across Pennsylvania hospitals, such records are retained in the analysis to avoid potential biases in mortality ratings.

- ***Risk-Adjusted 30-Day Readmissions.*** This measure is reported as a statistical rating that represents the number of patients who are readmitted following their initial hospital stay. A readmission is defined as a subsequent acute care hospitalization to any Pennsylvania general and specialty general acute care hospital, where the admit date is within 30 days of the discharge date of the original hospitalization. To determine the risk-adjusted readmission rating, PHC4 compares the number of patients one could reasonably expect to be readmitted, after accounting for patient risk, with the actual number of readmissions. (Please see “Understanding the Symbols” box on the previous page.) While some re-hospitalizations can be expected, high quality care may lessen the need for subsequent hospitalizations. For most conditions and procedures in this report, potentially planned readmissions were excluded from the analysis (noted in the results where this occurs). Identifying readmissions that were potentially planned was based on methods developed by the CMS for identifying potentially planned readmissions (please refer to the Technical Notes at www.phc4.org).
- ***Case Mix Adjusted Average Hospital Charge.*** This report also includes the average hospital charge for each of the 16 conditions and procedures. The average hospital charge represents the entire length of the hospital stay. It does not include professional fees (e.g., physician fees) or other additional post-discharge costs, such as rehabilitation treatment, long-term care and/or home health care. The average charge is adjusted for the mix of cases that are specific to each hospital. (For more information, please refer to the Technical Notes at www.phc4.org). While charges are what the hospital reports on the billing form, they may not accurately represent the amount a hospital receives in payment for the services it delivers. Hospitals usually receive less in actual payments than the listed charge.

In the payments section of the report is information about Medicare payments:

- ***Medicare Payments.*** This section of the report displays the average payments made by Medicare fee-for service for the 16 medical conditions/surgical procedures included in this report. This information is also broken down by the MS-DRGs associated with each condition. The most recent payment data available to PHC4 is for federal fiscal year 2017.

About the Report

Uses of this report

This report can be used as a tool to examine hospital performance in specific treatment categories. It is not intended to be a sole source of information for making decisions about health care, nor should it be used to generalize about the overall quality of care provided by a hospital. Readers of this report should use it in discussions with their physicians who can answer specific questions and concerns about their care.

- **Patients/Consumers** can use this report as an aid in making decisions about where to seek treatment for the conditions detailed in this report. This report should be used in conjunction with a physician or other health care provider when making health care decisions.
- **Group Benefits Purchasers/Insurers** can use this report as part of a process in determining where employees, subscribers, members, or participants should go for their health care.
- **Health Care Providers** can use this report as an aid in identifying opportunities for quality improvement and cost containment.
- **Policymakers/Public Officials** can use this report to enhance their understanding of health care issues, to ask provocative questions, to raise public awareness of important issues, and to help constituents identify health care options.
- **Everyone** can use this information to raise important questions about why differences exist in the quality and efficiency of care.

The measurement of quality is highly complex, and the information used to capture such measures is limited. A hospital death or a readmission is sometimes an unavoidable consequence of a patient's medical condition. Hospitals and physicians may do everything right, and the patient may still die or need to be readmitted. However, the statistical methods used for this report eliminate many of the clinical and medical differences among the patients in different hospitals, thereby allowing us to explore the real differences in the measures presented. The pursuit of these issues can play an important and constructive role in raising the quality while restraining the cost of health care in the Commonwealth of Pennsylvania.

Key Findings

Mortality Rates

Statewide in-hospital mortality rates showed a statistically significant decrease from 2012 to 2017 in nine of the 15 conditions reported. The largest decrease was in Respiratory Failure, where the mortality rate decreased from 15.2% in federal fiscal year 2012 to 8.9% in federal fiscal year 2017.

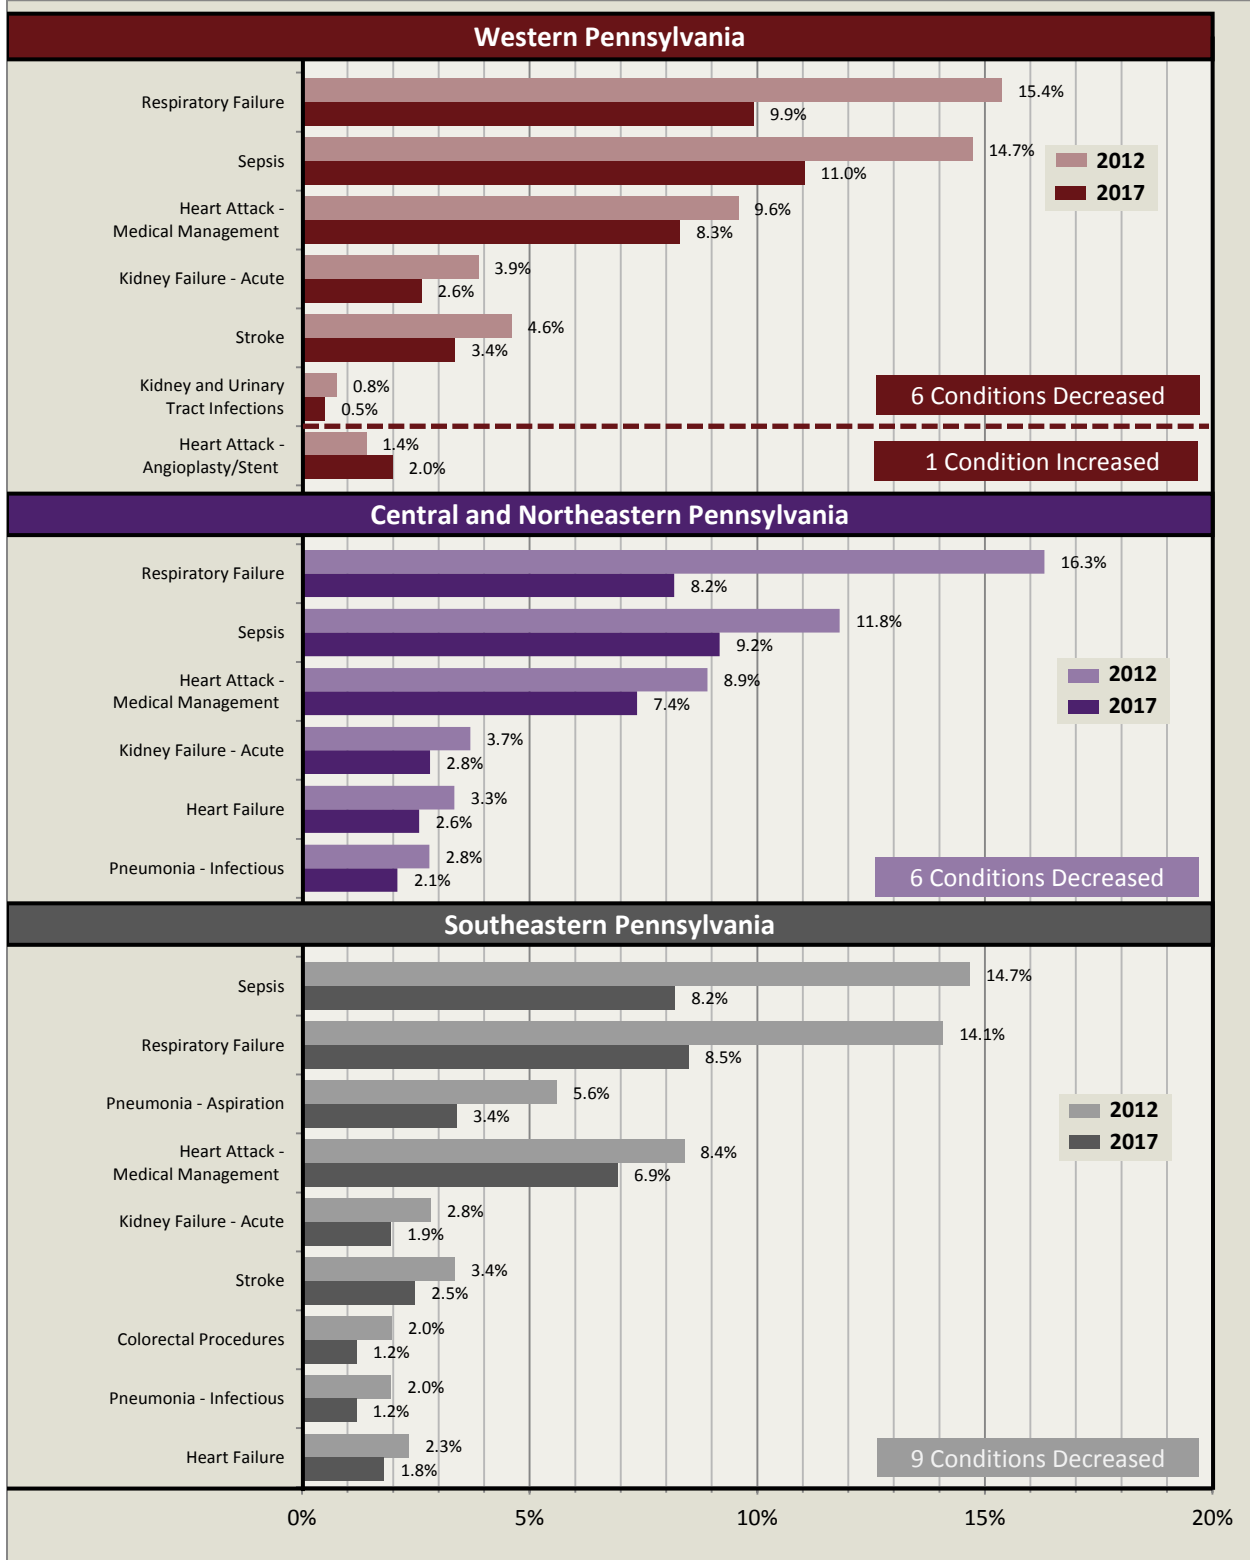

No condition showed a statistically significant increase in the in-hospital mortality rate during this time period.

Key Findings

Mortality Rates

Across different areas of the state, there were statistically significant differences in the in-hospital mortality rates from federal fiscal year 2012 to federal fiscal year 2017 for the conditions below.

Key Findings

Mortality Rates

Taking patient risk into account, the following in-hospital mortality rates across the different areas of the state were significantly higher or lower than expected in federal fiscal year 2017.

	Conditions with Mortality Rates Statistically <u>Lower</u> than Expected	Conditions with Mortality Rates Statistically <u>Higher</u> than Expected
Western Pennsylvania	<ul style="list-style-type: none"> • None 	<ul style="list-style-type: none"> • Chronic Obstructive Pulmonary Disease (COPD) • Heart Attack – Angioplasty/Stent • Heart Attack – Medical Management • Heart Failure • Pneumonia – Aspiration • Pneumonia – Infectious • Respiratory Failure • Sepsis • Stroke
Central and Northeastern Pennsylvania	<ul style="list-style-type: none"> • None 	<ul style="list-style-type: none"> • Abnormal Heartbeat • Kidney Failure – Acute • Sepsis • Stroke
Southeastern Pennsylvania	<ul style="list-style-type: none"> • Abnormal Heartbeat • Colorectal Procedures • Heart Attack – Medical Management • Heart Failure • Kidney and Urinary Tract Infections • Kidney Failure – Acute • Pneumonia – Aspiration • Pneumonia – Infectious • Respiratory Failure • Sepsis • Stroke 	<ul style="list-style-type: none"> • None

Western Pennsylvania:

- After accounting for patient risk, hospitals in Western Pennsylvania as a whole had in-hospital mortality rates that were significantly higher than expected for nine conditions, the greatest difference occurring in Pneumonia – Aspiration (6.7% actual, 5.2% expected).

Central and Northeastern Pennsylvania:

- After accounting for patient risk, hospitals in Central and Northeastern Pennsylvania as a whole had in-hospital mortality rates that were significantly higher than expected for four conditions, the greatest difference occurring in Kidney Failure – Acute (2.8% actual, 2.4% expected).

Southeastern Pennsylvania:

- After accounting for patient risk, hospitals in Southeastern Pennsylvania as a whole had in-hospital mortality rates that were significantly lower than expected for eleven conditions, the greatest difference occurring in Pneumonia – Aspiration (3.4% actual, 5.4% expected).

Key Findings

Readmission Rates

Statewide 30-day readmission rates* showed a statistically significant decrease in twelve of the 16 conditions reported. The largest decrease was in Heart Attack – Medical Management, where the readmission rate decreased from 20.7% in federal fiscal year 2012 to 17.7% in federal fiscal year 2017.

No condition showed a statistically significant increase in the 30-day readmission rate during this time period.

* Potentially planned readmissions were excluded from the analysis (for all conditions except Abnormal Heartbeat).

Key Findings

Readmission Rates

Across different areas of the state, there were statistically significant differences in the 30-day readmission rates* from federal fiscal year 2012 to federal fiscal year 2017 for the conditions below.

* Potentially planned readmissions were excluded from the analysis (for all conditions except Abnormal Heartbeat).

Key Findings

Readmission Rates

Taking patient risk into account, the following 30-day readmission rates* across the different areas of the state were significantly higher or lower than expected in federal fiscal year 2017.

	Conditions with Readmission Rates Statistically <u>Lower</u> than Expected	Conditions with Readmission Rates Statistically <u>Higher</u> than Expected
Western Pennsylvania	<ul style="list-style-type: none"> • None 	<ul style="list-style-type: none"> • Abnormal Heartbeat • Diabetes – Medical Management • Heart Failure • Kidney and Urinary Tract Infections • Pneumonia – Infectious • Sepsis
Central and Northeastern Pennsylvania	<ul style="list-style-type: none"> • Abnormal Heartbeat • Heart Attack – Medical Management • Heart Failure • Kidney and Urinary Tract Infections • Kidney Failure – Acute • Respiratory Failure • Sepsis 	<ul style="list-style-type: none"> • None
Southeastern Pennsylvania	<ul style="list-style-type: none"> • None 	<ul style="list-style-type: none"> • Chest Pain • Chronic Obstructive Pulmonary Disease (COPD) • Diabetes – Medical Management • Kidney and Urinary Tract Infections • Kidney Failure – Acute • Respiratory Failure • Sepsis

* Potentially planned readmissions were excluded from the analysis (for all conditions except Abnormal Heartbeat).

Western Pennsylvania:

- After accounting for patient risk, hospitals in Western Pennsylvania as a whole had 30-day readmission rates that were significantly higher than expected for six conditions, the greatest difference occurring in Diabetes – Medical Management (20.3% actual, 18.2% expected).

Central and Northeastern Pennsylvania:

- After accounting for patient risk, hospitals in Central and Northeastern Pennsylvania as a whole had 30-day readmission rates that were significantly lower than expected for seven conditions, the greatest difference occurring in Kidney and Urinary Tract Infections (13.1% actual, 15.0% expected).

Southeastern Pennsylvania:

- After accounting for patient risk, hospitals in Southeastern Pennsylvania as a whole had 30-day readmission rates that were significantly higher than expected for seven conditions, the greatest difference occurring in COPD (21.7% actual, 20.5% expected).

Key Findings

Volume of Hospital Admissions

The following chart shows the statewide percent change in volume*, from federal fiscal year 2012 to federal fiscal year 2017, for each of the 16 conditions and procedures included in this report (admission totals from federal fiscal year 2017 are shown in parentheses).

Chest Pain had the largest percentage decrease in volume (-63%), from 14,510 discharges in federal fiscal year 2012 to 5,384 in federal fiscal year 2017.

Sepsis had the largest percentage increase in volume (+77%), from 38,502 discharges in federal fiscal year 2012 to 68,100 in federal fiscal year 2017.

* Changes in coding requirements or usage may have influenced the variations in volume observed over time.

Key Findings

Medicare Fee-for-Service Payments

Federal Fiscal Year 2017 Data for Pennsylvania Residents

- Medicare fee-for-service was the primary payer for 38.1% of the statewide admissions for Pennsylvania residents in federal fiscal year 2017 for the conditions and procedures in this report, for a total of nearly \$1.14 billion (\$1,137,792,875).
 - For Western Pennsylvania, Medicare fee-for-service was the primary payer for 30.0% of admissions in this report, for a total of over \$266 million.
 - For Central and Northeastern Pennsylvania, Medicare fee-for-service was the primary payer for 44.9% of admissions in this report, for a total of over \$346 million.
 - For Southeastern Pennsylvania, Medicare fee-for-service was the primary payer for 40.4% of admissions in this report, for a total of over \$525 million.

- The condition with the lowest statewide average Medicare fee-for-service payment in federal fiscal year 2017 was Chest Pain, at \$3,873 per hospitalization. The condition with the highest statewide average Medicare fee-for-service payment in federal fiscal year 2017 was Colorectal Procedures, at \$18,320 per hospitalization.

	Condition or Procedure with <u>Lowest</u> Average Payment	Condition or Procedure with <u>Highest</u> Average Payment
Statewide	<i>Chest Pain: \$3,873</i>	<i>Colorectal Procedures: \$18,320</i>
Western Pennsylvania	Chest Pain: \$3,568	Colorectal Procedures: \$19,560
Central and Northeastern Pennsylvania	Chest Pain: \$3,374	Colorectal Procedures: \$16,359
Southeastern Pennsylvania	Chest Pain: \$4,389	Colorectal Procedures: \$19,142

Surgical procedure performed on the colon (large intestine) and rectum (last section of the large intestine). Reasons for colorectal procedures include cancer and diverticulitis (severe inflammation of large intestine). Common procedures include removal of the rectum or part or all of the large intestine. Does not include patients with abdominal trauma.

Understanding the Symbols

The symbols displayed in this report represent a comparison of a hospital's actual rate of mortality or readmission to its expected rate, which takes into account varying illness levels among patients (see Accounting for High Risk Patients in About the Report).

- Rate was significantly lower than expected.
- ⊙ Rate was not significantly different than expected.
- Rate was significantly higher than expected.

NR Not reported. Too few cases after exclusions.

Potentially planned readmissions were excluded from the readmission analysis.

Gallbladder Removal – Laparoscopic

Removal of the gallbladder using several small incisions and a laparoscope (small camera on the end of an instrument) inserted into the abdomen. This type of procedure is sometimes referred to as “minimally invasive” surgery. Common reasons for laparoscopic gallbladder removal include cholelithiasis (stones in the gallbladder) and cholecystitis (inflammation of the gallbladder).

Understanding the Symbols

Heart Attack – Medical Management

Occurs when there is blockage or obstruction in a blood vessel (coronary artery) causing damage or death to an area of the heart (myocardial infarction). Patients who are treated with a balloon (angioplasty)/stent procedure or open heart surgery are not included.

Understanding the Symbols

The symbols displayed in this report represent a comparison of a hospital's actual rate of mortality or readmission to its expected rate, which takes into account varying illness levels among patients (see Accounting for High Risk Patients in About the Report).

- Rate was significantly lower than expected.
- ⊙ Rate was not significantly different than expected.
- Rate was significantly higher than expected.
- NR Not reported. Too few cases after exclusions.

* Indicates hospitals that provided advanced cardiac services (angioplasty/stent procedures for heart attack) during the report period. This information is provided since patients admitted to facilities that do not provide advanced cardiac services may be transferred, for further diagnosis and treatment, to facilities that provide these services.

Potentially planned readmissions were excluded from the readmission analysis.

Heart Attack – Medical Management

Occurs when there is blockage or obstruction in a blood vessel (coronary artery) causing damage or death to an area of the heart (myocardial infarction). Patients who are treated with a balloon (angioplasty)/stent procedure or open heart surgery are not included.

Understanding the Symbols

The symbols displayed in this report represent a comparison of a hospital's actual rate of mortality or readmission to its expected rate, which takes into account varying illness levels among patients (see Accounting for High Risk Patients in About the Report).

- Rate was significantly lower than expected.
- ⊙ Rate was not significantly different than expected.
- Rate was significantly higher than expected.
- NR Not reported. Too few cases after exclusions.

* Indicates hospitals that provided advanced cardiac services (angioplasty/stent procedures for heart attack) during the report period. This information is provided since patients admitted to facilities that do not provide advanced cardiac services may be transferred, for further diagnosis and treatment, to facilities that provide these services.

Potentially planned readmissions were excluded from the readmission analysis.

Heart Failure

Inability of the heart to pump enough blood to meet the needs of the body leading to swelling of the legs and shortness of breath from fluid build-up in the lungs.

Common causes of heart failure include heart disease (e.g., coronary artery disease and heart valve problems) and long-standing hypertension (high blood pressure).

Understanding the Symbols

The symbols displayed in this report represent a comparison of a hospital's actual rate of mortality or readmission to its expected rate, which takes into account varying illness levels among patients (see Accounting for High Risk Patients in About the Report).

- Rate was significantly lower than expected.
- ⊙ Rate was not significantly different than expected.
- Rate was significantly higher than expected.

NR Not reported. Too few cases after exclusions.

Potentially planned readmissions were excluded from the readmission analysis.

Respiratory Failure

Failure of the lungs to support the exchange of oxygen and carbon dioxide causing impairment of critical body functions. Treatment depends on the severity of the condition. Included are both acute (short-term illness that is treated as a medical emergency) and chronic (develops over time and may require long-term treatment) forms. In some cases, a mechanical ventilator (“breathing machine”) may be necessary to assist with breathing.

Understanding the Symbols

The symbols displayed in this report represent a comparison of a hospital’s actual rate of mortality or readmission to its expected rate, which takes into account varying illness levels among patients (see Accounting for High Risk Patients in About the Report).

- Rate was significantly lower than expected.

Sepsis

A system-wide inflammatory response to infection that can worsen and include life-threatening acute organ dysfunction.

Understanding the Symbols

The symbols displayed in this report represent a comparison of a hospital's actual rate of mortality or readmission to its expected rate, which takes into account varying illness levels among patients (see Accounting for High Risk Patients in About the Report).

- Rate was significantly lower than expected.
- ⊙ Rate was not significantly different than expected.
- Rate was significantly higher than expected.
- NR Not reported. Too few cases after exclusions.

Potentially planned readmissions were excluded from the readmission analysis.

Medicare Payments

The following table includes information about payments made by Medicare for the 16 medical conditions/surgical procedures included in this *Hospital Performance Report*. This analysis is based on data from federal fiscal year (FFY) 2017, which is the most recent payment data available to PHC4. Displayed are the average amounts paid by Medicare fee-for-service for inpatient hospitalizations of Pennsylvania residents only. Payments from Medicare Advantage plans (e.g., Medicare HMOs) are not included, nor are patient liabilities (e.g., coinsurance and deductible dollar amounts).

The average Medicare fee-for-service payment is calculated using the claim payment amount based on data provided by the Centers for Medicare and Medicaid Services (CMS). The average payment is calculated by summing the payment amounts for the cases in a particular medical condition/surgical

procedure and dividing the sum by the number of cases in that condition/procedure group.

Most of the medical conditions and surgical procedures included in this report are defined using ICD-10-CM/PCS (International Classification of Diseases, Tenth Revision, Clinical Modification/Procedure Coding System) diagnosis and procedure codes, with a secondary requirement that they be limited to particular MS-DRGs (Medicare Severity – Diagnosis-Related Groups) – information available from the discharge data that PHC4 receives from Pennsylvania hospitals. One condition (Chest Pain) is comprised of a single MS-DRG.

In this section, average payments are displayed for the 16 medical conditions/surgical procedures included in this report – broken

down by the MS-DRGs included within each condition/procedure. While the 16 conditions/procedures have been defined using diagnosis and procedure codes that represent a clinically cohesive population, the payment data is displayed by the individual MS-DRGs included within each condition to account for variations in case mix.

The payments analysis is based on data from federal fiscal year 2017. This information, provided by CMS, reflects the average amounts paid by Medicare fee-for-service for inpatient hospitalizations of Pennsylvania residents only.

Medicare Payments
